Professional Skills

- Excellent teamwork skills (gained while working within the advertising agency setting and interacting effectively with other departments, team members and supervisors to accomplish tasks)
- Strong oral communication skills (as a result of regular participation in presentations, reviews and client meetings throughout my career)
- Effective written communication skills (demonstrated by writing approved creative rationales, scripts, internal correspondence and reports at FP7 and HakuHodo)
- Excellent time management skills (perfected while meeting tight, daily deadlines, at the DailyStar newsroom)
- Immaculate attention to details (mastered while producing, supervising and proofchecking final artwork at HakuHodo)
- Ability to plan projects, delegate tasks, coordinate with team members and achieve goals (as demonstrated by directing winning pitch campaigns at FP7)
- Ability to work independently (after managing projects from concept to final artwork stage at both agencies)

Professional Activity during the 2008-2009 Academic Year

1. Land Art Generator Initiative, Principal Investigator The UAE Land Art Generator Initiative (LAGI) is a landmark initiative to bring together artists, architects, scientists, and engineers in a first of its kind collaboration. The goal of the Land Art Generator Initiative is to design and construct a series of land art installations across the UAE that uniquely combine aesthetic intrigue with clean energy generation. The LAG viewing platforms will be tourist destinations that draw people from around the world to experience the beauty of the collaborative art creations here in the United Arab Emirates. At the same time, the art itself will continuously distribute clean energy into the electrical grid with each land art sculpture having the potential to provide power to up to 50,000 homes in the UAE.
2. HOT SPOTS: What Comes After Oil?, Principal Investigator Before change can occur, it must be imagined. Thus we have chosen the image and physical site of the petrol station —perhaps an iconic relic of future generations. Owing to their abandonment and often to their architecture, these places have a particular aura and are indicative of this worldwide politically charged question: _What Comes After Oil? Taking as points of departure are HOT SPOTS (petrol stations) in Munich, Germany; Pittsburgh, USA; and Dubai, United Arab Emirates. We have chosen these cities, local to where we live, as “case studies” for initiating a multi-national dialogue and exploration of the past, present and future of oil. Extending out from these HOT SPOTS in a radius of 200miles/322 kilometers, we will reclaim abandoned gas stations as platforms for public art. In addition to these primary sites, there are abandoned petrol stations all over the world. Independent of the central project, these SATELLITES will be dealt with separately by artists and artist groups. However, they will be linked with the platform HOT SPOTS. In an attempt to reduce (and therefore re-imagine) our carbon footprint, virtual communications will be paramount. Live streaming, online papers, virtual classrooms and galleries, and the like will preserve physical resources and result in an international cacophony. Information, maps, and project programming will be disbursed through HOTSPOT offices in Munich, Pittsburgh, and Dubai and virtually on the web.

14. "The Shape of Recitation: Qur'anic Calligraphy as Extension of the Letter," presented at the Thirteenth Annual Berkeley Graduate Symposium: Interdisciplinary Approaches to the Study of Visual Representation, University of California at Berkeley, Berkeley, CA, March 16, 2002 (Juried Panel).

Academic Service and Event Organization

1. Board Member, African and African-American Studies Research Project, University of California, San Diego, 2001-Present.
2. Designer and Curator, Factory School, 2005-Present.
3. Association for Africanist Anthropology, Graduate Student Representative and Web Master, 2006-Present.
4. Co-organizer with Bennetta Jules-Rosette, "Signifiers of Social Inequality and Narratives of Inclusion in Comparative Perspective" for the 106th Annual Meeting of the American Anthropological Association, Washington, D.C., November 2007.
5. Co-organizer with Bennetta Jules-Rosette, "Representing the Social Self: African Art and Anthropology" panel at the 105th Annual Meeting of the American Anthropological Association, San José, CA, November 16, 2006.
6. Co-organizer and Curator with Ayhan Aytes, Communication in the Wild Showcase, August 21, 2006, University of California, Humanities Research Institute.
7. Campus Organizer, MadCat Women's International Film Festival (Film screening of tour festival program), May 24, 2006, University of California, San Diego.
8. Co-organizer and Curator with Ricardo Guthrie and Brian Goldfarb, Communication in the Wild Showcase, May 19, 2006, University of California, San Diego.
9. Co-Organizer and Technical Assistance, "The Making of Africa Remix: Contemporary African Art in Global Perspective" by Simon Njami.
10. Co-organizer with Bennetta Jules-Rosette, Josephine Baker Film Symposium, University of California, San Diego, La Jolla, CA, February 17, 2006.
11. Co-organizer with Bennetta Jules-Rosette, Dangerous Ground Film Symposium, University of California, San Diego, La Jolla, CA, February 4, 2005.
12. Graduate Student Representative, Hiring Committee: "Critical Studies in Communication Technology" and "Digital Media Production and Theory," Dept. of Communication, University of California, San Diego, 2004-2005.
13. Graduate Student Representative, Space and Equipment Committee, Dept. of Communication, University of California, San Diego, 2003-2004.
14. Co-organizer and Curator with Ricardo Guthrie and Bill Marsh, Communication in the Wild Showcase, April 16, 2004, University of California, San Diego.
15. African and African American Studies Research Project, University of California, San Diego, Administrative Assistant for African Studies Minor, Program Symposia, and Colloquia (2000-2001). Two-year theme of Borders, Boundaries and New Frontiers.

Media Productions, Performances, and Exhibits

1. "We are Hip-Cap" (PowerPoint Performance piece), performed at Communication in the Wild Showcase, University of California, San Diego, CA, May 19, 2006.
2. "Translation Station: Jan Patocka" (Gestural Dance Translation Experiment), performed in the San Diego Poetry Guild Fall Showcase, San Diego, CA, October 27, 2004.
3. "What We Do" (Gestural Dance Tutorial Performance), performed at Communication in the Wild Showcase, University of California, San Diego, CA, April 16, 2004.
4. "A [Tentative] Outline for Symbol Formation" (Tutorial Performance), performed at the San Diego Poetry Guild Winter Showcase 2004, San Diego, CA, January 16, 2004.
5. "Searching for the Qur'an" (20-minute Video, with Devon Smith), 2003.

6. Awarded the 2004 Outstanding Video in African and Diaspora Studies, by the African and African-American Studies Research Project, University of California, San Diego. "Small Books, Deep Memories: Books Fit for a Travel Pouch" (Book Exhibit), 2nd Place, Friends of the Library Book Competition, Geisel Library, University of California, San Diego, May 2003.
7. "Desperanto" (Poetry-Dance Performance, with Bill Marsh), performed at AV Text Fest #6, Mexicali, MX, April 11, 2003 and the Hotels/Motels Exhibition, San Diego, CA, December, December 20, 2003.
8. "Shanghai Gardens" (Interactive Multimedia, with Ge Jin), submitted to Memefest 2003.

COMPREHENSIVE RESEARCH LISTS

Last Update: July 2009

Department of Management

Ahmad Kayali	Chair and Assistant Professor of Business Administration
Benedikt Schwittay	Associate Professor of Management
Chafik Abid	Assistant Professor of Decision Sciences
Damien Horigan	Associate Professor of Business Administration
Eric Benson	Associate Professor of Decision Sciences
Evangellos Dedoussis	Associate Professor of Management
Khaldoun Ababneh	Assistant Professor of Management
Lotfi Tadj	Professor of Decision Sciences
Nilesh Khare	Assistant Professor of Management
Scott Hall	Assistant Professor of Business Administration
Shadi Abouzeid	Assistant Professor of Decision Sciences
Shahin Bahrami	Assistant Professor of Management
Sharad Barkataki	Assistant Professor of Management
Susan Zeidan	Assistant Professor of Management

Department of Accounting and Finance

Mohammed Abu-Ali	Chair and Assistant Professor of Economics
Boaz Nandwa	Assistant Professor of Economics
Casy (Kassim) Dakhlallah	Assistant Professor of Finance
Jihad Nader	Professor of Finance
Karim Mimouni	Assistant Professor of Finance
Moh'd Al Azzam	Assistant Professor of Economics
Ronald Lackland	Assistant Professor of Accounting
Scott Tan	Assistant Professor of Accounting
Steven Buigut	Assistant Professor of Economics
Vadhindran Rao	Associate Professor of Finance

Department of Marketing and Marketing Communications

Tarek Mady	Chair and Associate Professor of Marketing
Dennis Lee	Assistant Professor of Marketing
Helene Cherrier	Assistant Professor of Marketing
Jim Grant	Professor of Marketing
Kaleel Rahman	Assistant Professor of Marketing
Sara Kamal	Assistant Professor of Marketing Communications

Department of Management

Dr. Ahmad Kayali

Chair of the Department of Management / Assistant Professor of Business Administration

1. Professor Kayali's research focuses on the design and application of international arbitration rules to business organizations.

Dr. Benedikt Schwittay

Associate Professor of Management

Journal/ Conference Papers

Major Published Research

1. Abu-Ali, M. (2003). "The Relationship between Unanticipated Inflation and Stock Return Revisited: A New Empirical and Narrative Approach," *Dissertation*, Chair: Willem Thorbecke, Ph.D. The study applies the Flexible Least Square (FLS) econometric method for the first time to investigate the relationship between inflation and equity returns. The study also uses a historical narrative approach to understand the nature and direction of this correlation. The study affirms the negative relationship between inflation and stock returns and indicates an existence of parameter instability of coefficients. Findings also reveal the critical effect of market psychology.
2. Abu-Ali, M. Forthcoming (Book) "Models of Development in Middle East North Africa Region: Going beyond the Rhetoric of Economists." This book will investigate, in part, whether certain models of development are applicable in MENA, given the economic, cultural, and social characteristics of the region and of individual countries. The book's objective is to explore the choice, cost, and prospective challenges for economic growth in MENA. The book is intended to target a diverse audience including the business community, corporate leaders, economic practitioners, and public service leaders.

Papers

1. Abu-Ali, M. (2002) "Trade Agreement in MENA: A Quick Comparison," The World Bank. Washington, DC.
 - a. Objective: Investigating the scope of the major components of multilateral and bilateral trade agreements of Middle East North Africa region and its implication for successful regional integration.
Variables: Coverage of internal liberalization (merchandise; contingent protection including anti-dumping and countervailing duties, safeguards, rules of origin, and national treatment); sector covered.
 - b. Implications: Welfare effects of North-South and South-South RIAs, harmonization challenges, importance of services liberalization and full removal of tariffs on Arab trade.
2. Abu-Ali, M. (2002) "Economic Volatility in the Middle East North Africa: A Framework for Future Research," The World Bank. Washington, DC.
 - a. Objective: Investigating the degree of economic volatility in MENA and comparing its macroeconomic outcome to other regions of the world.
 - b. Variables: Real GDP growth, recessions, output volatility, real private consumption, ratio of private consumption to GDP volatility, investment volatility, real exchange rates volatility, inflation volatility, and fiscal policy volatility.
 - c. Implications: Although the impact of oil price shocks on the balance of payments components of MENA countries has been apparent, volatility has decreased in recent years due to stabilization measures and structural reforms. Higher private consumption volatility relative to output volatility implies that households have problems in smoothing their consumption during times of

income shocks. Uncertainty about real income remains a source of concern. Macroeconomic volatility that is exacerbated by uncertainty negatively affects economic growth.

Research Interests

1. Financial analysis that includes financial structure planning, balance sheet analysis, merger and acquisition, financial performance, asset allocation, privatization of financial sectors, and stock market analysis.
2. Foreign Direct Investment that includes studying the effect of FDI on economic growth, effect of domestic laws and regulations on the flow of FDI, the relationship between degree of economic openness and the effectiveness of FDI, the current status and future trends of FDI flows in the world and their regional distribution, and their relation with globalization and GATT rounds outcomes.
3. Studying East Asian Economies that includes discussing the determinants of East Asian economic miracles, country-specific models of developments, causes and effects of financial crisis, implications to other developing economies, and reasons for the slowing growth in some EA countries.
4. Energy Economics that includes supply and demand analysis, the share of oil in the Global energy market, recent development in Gas markets and growth uncertainties, impact of oil price/revenue volatility on economic growth, environment and social acceptability, reserve issues and technological innovations, and future choices and challenges for the producers and consumers .
5. Game Theory Applications that include investigating the behavior of cartels, evaluating competition games, and understanding strategies of oil importers vis-à-vis oil exporters.
6. Strategic Management, for example, analysis of long term corporate objectives and their relationship with short and medium term goals, comparative advantage analysis, strategic market alliances, Global positioning, market share, vertical and horizontal integration, market penetration, and strategic investments
7. Investment Analysis, for instance NPV, IRR, PI analysis, risk assessment, financial risk, business risk, systematic and unsystematic risks, fundamental and technical analysis of performance, capital investment structures, marginal cost/marginal benefit, equity and inflation correlations, business environment analysis, and construction of investment portfolios.
8. Monetary Economics that include monetary policy of Central Banks, devaluation of currencies, monetary targets(inflation, income, interest rates, and money supply), currency boards and monetary integration.
9. International Trade, for example, GTT rounds, implication of joining WTO to small country economic and industrial growth, necessary conditions for successful regional integration, advantages/disadvantages of Bilateral and multilateral trade agreements, and trade barriers (tariff and non-tariff) and their welfare impact on the society.
Privatization, for example, cost and benefits of privatizing certain economic sectors, lessons from previous experiences, the importance of institutional reform for a success of privatization, capacity building for effective management of privatization, and the importance of country-specific socioeconomic characteristics for long-term planning and implementing privatization strategies.

Funded Research Projects

1. Alaa K. Ashmawy (PI), J. John Lu (Co-PI). Integrated work zone safety management system and analysis tools. *Sponsor: Florida Department of Transportation, 9/2005-8/2007. \$150,000.*
2. Alaa K. Ashmawy (PI), Ahmed H. Abdelrahman (PI). Modeling and analysis of geogrid-reinforced earth structures under earthquake loading. *Sponsors: National Science Foundation & U.S. Department of State, 9/2005-8/2008. \$58,000.*
3. Alaa K. Ashmawy (PI). Settlement prediction of stone columns installed by vibro-flotation. *Sponsor: Egyptian Cultural and Educational Bureau (Joint Supervision Program), 9/2004-9/2006. \$17,000.*
4. Alaa K. Ashmawy (PI). Calibration and accuracy assessment of the TDR one-step method for quality control of compacted soils. *Sponsor: Florida Department of Transportation, 6/2004-12/2005. \$46,000*
5. Alaa K. Ashmawy (PI). Integrated Subsurface Information System – Phase II. *Sponsor: Florida Department of Transportation, 6/2004-5/2008. \$32,000.*
6. Alaa K. Ashmawy (PI/PM), Beena Sukumaran (PI), Sudeep Sarkar (Co-PI), Srikhant Mandayam (Co-PI). Three-dimensional characterization and modeling of angular materials. *Sponsor: US National Science Foundation, 8/2003-7/2006. \$359,000.*
7. Alaa K. Ashmawy (PI). Physical and numerical modeling of geogrid-soil cyclic interaction. *Sponsor: US National Science Foundation, 8/2003-7/2005. \$29,000.*
8. Alaa K. Ashmawy (PI), Ahmed H. Abdelrahman (PI). Alternative cap and liner systems for municipal solid waste landfills. *Sponsors: National Science Foundation & U.S. Department of State, 6/2003-5/2005. \$57,000.*
9. Alaa K. Ashmawy (PI). Stabilization of marginal soils using recycled materials. *Sponsor: Florida Department of Transportation, 6/2003-10/2005. \$124,000.*
10. A. Gray Mullins (PI), Alaa K. Ashmawy (Co-PI). Supplemental study on the influence of water table in drilled shaft construction. *Sponsor: Florida Department of Transportation, 5/2003-5/2004. \$74,000.*
11. Alaa K. Ashmawy (PI). Mechanical interaction of soil-geogrid systems. *Sponsor: Egyptian Cultural and Educational Bureau (Joint Supervision Program), 9/2002-2/2004. \$22,000.*
12. Alaa K. Ashmawy (PI). Soil improvement by stone columns. *Sponsor: Egyptian Cultural and Educational Bureau (Joint Supervision Program), 9/2001-8/2003. \$21,000.*
13. Alaa K. Ashmawy (PI). Evaluation of the Purdue TDR method for soil water content and density measurement. *Sponsor: Florida Department of Transportation, 9/2001-8/2003. \$101,000.*
14. Alaa K. Ashmawy (PI). Compatibility of incinerator ash-soil mix in alternative landfill liners and covers. *Sponsor: Florida Center for Solid and Hazardous Waste Management, 10/2001-9/2002. \$30,000.*
15. A. Gray Mullins (PI), Alaa K. Ashmawy (Co-PI). The influence of water table in drilled shaft construction. *Sponsor: Florida Department of Transportation, 1/2001-12/2002. \$160,000.*
16. Alaa K. Ashmawy (PI), Ahmed H. Abdelrahman (PI). Development of a multi-function geosynthetic testing apparatus. *Sponsors: National Science Foundation & U.S. Department of State, 11/2000-10/2003. \$44,000.*
17. Alaa K. Ashmawy (PI). Evaluation of the long-term performance of bentonite in geosynthetic clay liners. *Sponsors: CDM, Inc./GSE Lining/CETCO, 1/2000-12/2001. \$23,000.*

18. Alaa K. Ashmawy (PI), Daniel P. Hess (Co-PI), A. Gray Mullins (Co-PI), Autar K. Kaw (Co-PI), Abba Zayed (Co-PI). Acquisition of an axial-torsional loading system for civil, mechanical, and materials testing. *Sponsor: US National Science Foundation, with 30% USF cost-sharing.* 8/1999-7/2001. \$249,000.
19. Alaa K. Ashmawy (PI), Manjriker Gunaratne (Co-PI). Long-term behavior of geosynthetic-reinforced MSE wall system: numerical and analytical studies. *Sponsor: Florida Department of Transportation Subcontract from Florida Atlantic University,* 4/1999-4/2001. \$70,000.
20. Alaa K. Ashmawy (PI), A. Gray Mullins (Co-PI). Geographic Information System for FDOT districts One and Seven geotechnical data. *Sponsor: Florida Department of Transportation,* 2/1999-1/2001. \$150,000.
21. Alaa K. Ashmawy (PI). Cyclic and monotonic response of geosynthetic-soil systems: a discrete element approach. *Sponsor: University of South Florida Division of Sponsored Research,* 1/1998-2/1999. \$7,500.

DEPARTMENT OF CIVIL ENGINEERING

Dr. Elias I. Saqan

Chair of the Department of Civil Engineering / Assistant Professor of Civil Engineering

Awards and Honors

1. Provost's Award for Outstanding Research, the American University in Dubai, UAE, May 2009.
2. Awarded the Fulbright Scholarship sponsored by the US Department of State to conduct research at Purdue University, School of Civil Engineering, West Lafayette, Indiana, USA during the academic year 2005-2006. Research Title: "Shear Strength of Reinforced and Pre-stressed Concrete: A Unified Approach". http://www.cies.org/schlr_directories/vsdir05/Engi19.htm
3. Awarded the Outstanding International Student Award sponsored by the International Office, The University of Texas at Austin, for the Academic year 1989-1990.
4. Graduated Magna Cum Laude, Department of Civil Engineering, University of Houston, Houston, Texas, 1989.
5. Life member of Chi Epsilon Civil Engineering Honor Society since 1989.
6. Dean's List, Fall 1987-Summer 1989.

Research Statement Ph.D. Dissertation Research

The primary focus of my research during my doctoral years has revolved around designing processor architectures that meet the contradicting goals of performance demanded by high-end embedded applications and analyzability required for safety-critical real-time guarantees.

In recent years, due to increased customer demands and expectations, embedded software has been greatly growing in complexity and becoming hungrier for computational power. A modern vehicle for example, includes more than 50 embedded processors to implement various features of the car (engine control, anti-locking brakes, cruise control, climate control, infotainment, etc). This trend of increased complexity is not expected to slow down soon. On the contrary, the need for more computational power is expected to rise at a steeper rate, because the demand for more functionality and interactivity is utmost.

In order to catch up with this trend cost-effectively, embedded processors must target higher performance goals. By implementing many software tasks on a single high-performance processor, the overall number of processors in the system can be reduced, saving valuable area and improving the cost performance metric of the system. Simultaneous multithreading (SMT) or hyper-threading is especially an interesting technique to achieve such high-performance. An SMT processor supports executing multiple software tasks simultaneously, sharing the processor's resources at a fine-grain level. SMT effectively utilizes resources to achieve an overall performance better than that of a single task running alone. SMT is especially pertinent to embedded systems, because of the availability of a large number of software tasks that can execute simultaneously, making SMT very valuable to the development and success of future high performance embedded processors.

Although SMT effectively enhances average-case performance, it undermines analyzability, an utmost goal in designing safety-critical embedded real-time systems (such as engine throttle control, anti-locking brakes, and cruise control in a vehicle control system). In order to guarantee the timing correctness of safety-critical real-time systems, the worst-case performance of any task must be statically bounded and guaranteed. SMT is highly dynamic, where simultaneous tasks share and compete for resources in a complex and arbitrary fashion, making the performance of any single task greatly dependent on other running tasks. As such, analyzing and guaranteeing the worst-case performance of tasks on classic SMT processors is infeasible, rendering SMT unsafe and incompatible with real-time design.

In my dissertation, I tackle the challenge of designing a real-time SMT processor that reconciles the trade-off between performance and real-time guarantees. I propose Real-Time Virtual Multiprocessor (RVMP), a combined novel micro architecture and real-time scheduling framework to achieve this goal.

The first component of RVMP is a novel interference-free SMT micro architecture, where novel techniques ensure that processor resources are available to real-time tasks in a predictable and deterministic manner. Since real-time tasks have access to exclusive resources without competition or interference, the performance of any given task is totally independent from other simultaneously running tasks. This enables

the system to guarantee the worst-case performance of tasks, as if each task is running alone on a separate processor, achieving real-time analyzability. Moreover, the resources assigned to real-time tasks can be flexibly and fluidly changed during execution in a predetermined manner, achieving the performance of SMT_ne-grain resource sharing.

The second component of RVMP is a novel and highly effective of_line real-time scheduling framework that determines how resources are shared among real-time tasks, and how sharing fluidly changes in time.

The framework takes into account the timing requirements of all tasks, and produces a resource sharing pattern that guarantees meeting all timing requirements. The resulting sharing pattern is then passed to the processor through a specialized structure that orchestrates resource sharing accordingly at run-time.

Another important component of my research involves capitalizing on the unique RVMP microarchitecture to bridge the widening processor-memory speed gap, or the .memory wall.. While the frequencies of embedded processors are rapidly increasing to meet higher performance targets, memory speeds are increasing at a much lower rate, making memory latency a true performance limiter. The multithreaded RVMP architecture is capable of hiding some of that memory latency by overlapping it with useful computation from other tasks, improving the overall throughput of the system. However, in order to be beneficial in a safety-critical real-time system, any potential computation/memory overlap must be statically accounted for.

I propose a novel analytical framework that bounds the overlap between computation of tasks and on-going memory accesses of other tasks. This model conforms to the interference-free spirit of RVMP, where tasks are treated independently. This analytical model is integrated into RVMP's scheduling framework, providing the necessary formalism to safely and tractably exploit multithreading to tolerate memory latency in safety-critical real-time systems, making it possible to capitalize on higher frequency embedded processors and achieve higher performance targets, despite the widening processor-memory speed gap.

In summary, my dissertation research on real-time SMT enables, for the first time, reconciling the tradeoff between performance and real-time formalism in embedded systems. The concept of real-time SMT is a key enabler of the evolving of cost-effective future high-performance embedded applications and systems

Directions for Future Research

Mobile embedded devices are rapidly becoming complex, feature-rich computational powerhouses that play a crucial role in everyday life, economy, and science. The future impact of these devices will be even more dominant, opening new possibilities for creative applications ranging from bioinformatics to personal communication and entertainment. Future embedded processors have to meet the ever increasing demand for performance, interactivity, and usability, with clear emphasis on multimedia, graphics, and networked applications that require quality-of-service (QoS) guarantees. Meeting this increased performance demand in battery-operated devices, where energy budgets are very limited, is a challenging and interesting task.

To achieve these competing goals of performance, energy budgets, and real-time guarantees, I believe this problem should be approached as holistic system level design, where the traditional boundaries between traditional abstraction layers are eradicated. I want to investigate the interaction and collaboration between micro architecture, compilers, operating systems, and application code to achieve a coherent system that meets the required specifications and budget. Of special interest is devising novel micro architectures that are inherently energy conserving and at the same time target guaranteed performance. The features of such a micro architecture should be exposed to operating systems and compilers through the instruction set architecture (ISA), where novel techniques and algorithms at the software level collaborate with the underlying processor architecture in order to achieve design goals at all levels of the system.

This is a long term and interdisciplinary project that crosses the boundaries of computer science theory and practical engineering design. This project will develop an infrastructure that enables students to acquire a wide spectrum of experience in engineering research in several _elds highly relevant to the undergraduate and graduate curricula, as well as develop immediate market-based skills using state-of-the-art tools and languages.

Because of the growing interest in future high-performance and low power embedded systems, I am confident of my ability to spark interest and secure funding from internal and external agencies, businesses, and industrial sources.

Mathematics

Dr. Gerry Lege
Assistant Professor of Mathematics

Published documents

1. 2007, "A feature, a field and a friend: First steps. Consortium, No. 92, p. 3-5"
2. 2007, "Student responsiveness to mathematical modeling activity. Consortium, No. 93, p. 24-27"

3. 2008, "Considering context Consortium, No. 94, p. 20-22"
4. 2008, On research in teaching and learning mathematical modeling. Consortium, No. 95, p.8-12, Fall-Winter 2008.
5. 2009, Examining the modeling process. Consortium, No. 96, Spring-Summer 2009. (in press)
6. On forms, fences and mathematical modeling. Mathematics Teacher, no publication date yet

Documents in progress

1. The Consortium contributions are semi-annual articles for a regular column called "In Search of Research". My next three articles are on the topics of:
 - a) Papers submitted at the recent ICME Congress in Monterey, Mexico for Topic Study Group 21 on Teaching of Mathematical Modeling and Applications (July 2008)
 - b) What is actually taught in teaching mathematical modeling? (Focus on content of various courses on modeling and/or international research projects)
 - c) How do we know that content is being learned? (Focus on assessment of student learning in courses on modeling and/or international research projects specifically addressing assessment of student learning)
2. I have a paper written, but not completely in publishable format, discussing a variety of methods for teaching the same topic in algebra. (pedagogical content knowledge in mathematics)
3. I have a manuscript written about the teaching of mathematical modeling in the United States (or lack of it), but want to repackage it as two articles.
4. I am still working on the book that I am writing, called "Beyond Content Knowledge", which will be used for teacher training in mathematics education – credential programs, seminar courses, professional development programs.
